

Year 7 Video & Sound Editing

Creating a Video in Movie Plus

Step 1

Save a load of pictures to your work area - all in one folder! The more the better!

Step 2

Open Serif MoviePlus. Click on Start New Project.

Step 3

Click on Import Media then import and find all the pictures you've just saved.

Step 4

You now need to drag each picture onto the timeline at the bottom. Do this in the order you want them to show on your video. They need to be on the line that says video track.

TIP: The wider the pictures are, the longer they will play for. It's best to make them short so that your video is more interesting. Overlapping them will also make it more interesting for your audience to watch.

Text

You can add text to your video. To do this, click on **INSERT TEXT** just above the timeline. Text should be added to the timeline, just like the pictures are added - so the wider it is the longer it's on for.

Sound

You can add sound to your video. You need to find a track then use **import media**, just like when you added pictures. Drag your sound to the timeline on the Audio Track row.

Make it epic

To make your video even better, you need to experiment with the options in the program - think about clicking properties or galleries in the top menu box. Lastly, **DO NOT** delete the pictures from your area!

Audacity

Play **Record** **Pause**

Fast Forward

Takes you to the end of the audio

Zoom out

Contracts timeline
